## Instructions

Your portfolio site can be customized in any way you'd like from this point forward. The example project can be used as inspiration on how to structure your site's sections.

Your site is required to contain the following features:

- Navigation bar
- A primary header that has your full name
- Either a hero banner or some other imagery.
- see an example of a hero banner in flex box here [Hero Banner Tutorial](#)

Social Media Icons that link out to your various accounts (i.e Twitter, Linkedin, Angel List, etc)An "Email Me" button that, when clicked, allows the user to send an email to your professional email accountA footer sectionChallenges:

If you want to challenge yourself, add the following to your site:

- Add a form that has a text field for email and a text field for a message. When the user clicks the submit button, the form should send an email to your professional email address.
- Add dynamic scrolling. Your nav bar will have nav bar items that will dynamically scroll the user to different sections of your site. (investigate)
- Employ a design strategy. Using sites such as pinterest or dribbble, find a design pattern that inspires you and explain why you took this route in developing your site.

## Your Strategy

Replace the text in this section with a list of some of the major decisions that you made in this project. Here is an example:

- When choosing the color scheme for this site I chose green because I found that green colors instill trust in users. I also found that green is a color that encourages creative thinking. I found that in this article: [Green as a branding color](#)
- I chose to use percentages instead of pixels when making my border radiuses. I found that when I used pixels my image orders were a bit more square than I wanted them to be.
